

KLEIDSON ALMEIDA SANTOS

Mid-Level Software Engineer | Full Stack (TypeScript, Node.js, React) | Cloud & AI

Campina Grande, Paraíba, Brazil | (82) 99945-0453 | almeida@korvenlab.com
almeida.korvenlab.com | linkedin.com/in/kleidsonadesign

PROFESSIONAL SUMMARY

Software Engineer with 6 years of experience building scalable, resilient, and highly available applications. Career built across two complementary paths: 4+ years in freelance and independent development (2019-2024), delivering digital products and interfaces for clients and owned projects; and 2+ years in corporate environments (full-time/contract), working in QA, infrastructure, and software engineering. Specialist in the JavaScript and TypeScript ecosystem (Node.js and React.js), with strong expertise in Cloud Computing (Amazon Web Services - AWS) and DevOps culture. Experience in microservices architecture, Docker containerization, serverless, and infrastructure automation. Bachelor's degree in Information Systems in progress (expected completion: January 2027), with prior technical training in Web Development. Guided by SOLID principles, Clean Code, Clean Architecture, and Test-Driven Development (TDD).

TECHNICAL SKILLS

Backend: Node.js, TypeScript, Java, Spring Boot, RESTful API, Microservices, WebSockets, NestJS, Express
Frontend: React.js, Next.js, Tailwind CSS, Vite, UI/UX Design, Figma
Cloud & DevOps: AWS (EC2, S3, Lambda), Cloudflare, Docker, CI/CD, GitHub Actions, Shell Script, Python
Databases & Cache: PostgreSQL, MySQL, MongoDB, Redis
Quality & Architecture: Jest, Selenium, Clean Architecture, Design Patterns, SOLID, OWASP

PROFESSIONAL EXPERIENCE

Korven Lab

Full Stack Software Engineer | Tech Lead — December 2025 - Present

- End-to-end technical leadership on SaaS (Software as a Service) products, from architecture design to production deployment and monitoring, with a focus on technical delivery and code quality.
- Node.js backend development with Docker, ensuring high availability and horizontal scalability to support user growth without infrastructure rewrites.
- AWS infrastructure management (EC2, S3, Lambda) with FinOps practices, reducing server operational costs by approximately 30% through rightsizing and idle resource automation.
- Translation of business requirements into conversion- and retention-oriented React.js interfaces, aligning product, UX, and performance metrics.

INSS - National Social Security Institute (Brazil)

Infrastructure & Support Analyst — January 2025 - Present

- Support and monitoring of critical computing environments in a federal agency, applying DevOps culture to automate and optimize government processes.
- Development of Python and Shell Script automation for infrastructure routines, reducing critical incident response time by approximately 40%.
- Information security and operational data integrity through backup policies, access controls, and compliance with internal standards.

Appen

QA Analyst (Quality Assurance) — January 2024 - December 2024

- Creation, execution, and maintenance of automated end-to-end (E2E) test plans with Selenium and Python, mitigating critical failures before production deployment.
- Zero-regression releases in feature rollouts, collaborating with global development teams in agile continuous delivery cycles.
- Test scenario documentation and defect traceability, improving release predictability in staging environments.

FREELANCE & INDEPENDENT EXPERIENCE

Full Stack Developer | UI/UX Designer

March 2019 - December 2023

- Development of web applications and digital products for clients and owned projects, using JavaScript/TypeScript (Node.js, React.js) with payment integrations and third-party APIs.
- UI/UX design and visual identity for digital products, with Figma prototyping focused on usability and conversion.
- Built and evolved owned SaaS platforms (Wagoo, 2AVendas, Papufy), applying event-driven architecture, serverless, and OWASP security practices from the MVP phase.
- Full product lifecycle ownership: requirements gathering, data modeling, implementation, cloud deployment, and post-launch monitoring.

FEATURED PROJECTS

Wagoo (wagooobot.com) - Intelligent Scheduling & Automation SaaS

- Architected from scratch an event-driven platform with Webhooks for real-time integration with Google Calendar and WhatsApp Business API, eliminating manual scheduling and reducing client no-shows.
- Implemented serverless functions (AWS Lambda) and message queues for asynchronous processing, bypassing integrated API rate limits and supporting peaks of 500+ messages/hour without degradation.
- Delivered a Stripe-monetized platform with frictionless onboarding and average latency under 200ms on critical scheduling operations.

2AVendas (2avendas.com) - B2B CRM for Commercial Representatives

- Built a complete B2B CRM ecosystem with sales funnel, team management, centralized orders, and catalog portal for commercial representatives and distributors.
- Optimized checkout and critical pages with React.js and Node.js, reducing load time by approximately 50% (from ~4s to under 2s) and improving conversion in the subscription funnel (BRL 150/month).
- Integrated resilient payment gateways and sales funnel automation, reducing cart abandonment and operational rework for commercial teams.

Papufy (papufy.com) - Mobile-First Local Services Marketplace & Fintech

- Developed a geolocation- and category-based services marketplace, connecting providers and clients with a decoupled architecture and React 19 SPA frontend with lazy loading.
- Implemented real-time chat via WebSockets, proposals, and instant notifications; integrated Asaas gateway for checkout, payment splits, and digital wallet with secure withdrawal flows.
- Ensured OWASP security standard compliance, mitigating critical XSS (Cross-Site Scripting) and data injection vulnerabilities through sanitization (DOMPurify), rate limiting, CORS, and security headers (Helmet).
- Automated deployment with CI/CD on Vercel (frontend) and Render (API), with PostgreSQL modeled for transactional consistency in financial operations.

EDUCATION & CERTIFICATIONS

- Bachelor's in Information Systems - Unifacisa (In Progress | Expected completion: January 2027)
- Specialization: Prompt Engineering & Generative AI - Adapta / Nvidia
- Technical Course in Web Development - Microcamp
